

**WHAT IS CLAIMED IS:**

1           1. A displaying apparatus, comprising:

2           a displaying part for displaying a picture;

3           a selection input part for selecting for display a highlight portion within the picture of the  
4           displaying part;

5           a storage part for storing data according to the selection made through the selection input  
6           part; and

7           a controller for generating a highlight signal corresponding to the highlight portion based  
8           on the selected data, for composing the highlight signal with video signals to thereby generate  
9           composed video signals, and for displaying the highlight portion within the picture of the  
10          displaying part based on the composed video signals.

11          2. The displaying apparatus according to claim 1, wherein the controller adds the  
12          highlight signal to the video signals to thereby increase the level of the composed video signals  
13          of the highlight portion.

14          3. The displaying apparatus according to claim 1, wherein the controller subtracts the  
15          highlight signal from the video signals to thereby decrease the level of the composed video  
16          signals of the highlight portion.

1           4. The displaying apparatus according to claim 1, wherein the selection input part  
2 comprises a size control key for controlling a size of the highlight portion.

1           5. The displaying apparatus according to claim 4, wherein the selection input part  
2 comprises a position control key for controlling a position of the highlight portion.

1           6. The displaying apparatus according to claim 5, wherein the highlight signal comprises  
2 at least one color signal corresponding to the video signals; and  
3           the selection input part comprises a signal control key for controlling a level of said at  
4 least one color signal.

1           7. The displaying apparatus according to claim 4, wherein the highlight signal comprises  
2 at least one color signal corresponding to the video signals; and  
3           the selection input part comprises a signal control key for controlling a level of said at  
4 least one color signal.

1           8. The displaying apparatus according to claim 1, wherein the highlight signal comprises  
2 at least one color signal corresponding to the video signals; and  
3           the selection input part comprises a signal control key for controlling a level of said at

4 least one color signal.

1 9. The displaying apparatus according to claim 1, wherein the selection input part  
2 comprises a position control key for controlling a position of the highlight portion.

1 10. The displaying apparatus according to claim 9, wherein the highlight signal  
2 comprises at least one color signal corresponding to the video signals; and

3 the selection input part comprises a signal control key for controlling a level of said at  
4 least one color signal.

1 11. A method for controlling a displaying apparatus, comprising the steps of:  
2 selecting for display a highlight portion within a picture of the displaying apparatus;  
3 generating a highlight signal corresponding to the highlight portion;  
4 composing the highlight signal with video signals to thereby generate composed video  
5 signals; and  
6 displaying the highlight portion within the picture of the displaying apparatus.

1 12. The method according to claim 11, further comprising the step of storing data  
2 selected in the selecting step.

1 13. The method according to claim 11 wherein the composing step comprises adding the  
2 highlight signal to the video signals to thereby increase a level of the composed video signals.

1 14. The method according to claim 11, wherein the composing step comprises  
2 eliminating the highlight signal from the video signals to thereby decrease a level of the  
3 composed video signals.

1 15. The method according to claim 11, further comprising the step of controlling a size  
of the highlight portion.

1 16. The method according to claim 15, further comprising the step of controlling a  
position of the highlight portion.

1 17. The method according to claim 16, wherein the highlight signal comprises at least  
2 one color signal corresponding to the video signals;

3 said method further comprising the step of controlling a level of said at least one color  
4 signal.

1 18. The method according to claim 15, wherein the highlight signal comprises at least  
2 one color signal corresponding to the video signals;

3           said method further comprising the step of controlling a level of said at least one color  
4           signal.

1           19. The method according to claim 11, further comprising the step of controlling a  
2           position of the highlight portion.

1           20. The method according to claim 19, wherein the highlight signal comprises at least  
2           one color signal corresponding to the video signals;

3           said method further comprising the step of controlling a level of said at least one color  
4           signal.

1           21. The method according to claim 11, wherein the highlight signal comprises at least  
2           one color signal corresponding to the video signals;

3           said method further comprising the step of controlling a level of said at least one color  
4           signal.
